Isolated blunt traumatic injury to the submandibular gland is very rare. In the previous case reports, most patients with isolated submandibular gland injury had a good prognosis without any major complication. We report here a case of deep neck infection due to traumatic isolated submandibular gland fracture with computed tomography findings.

Building on the strength of the previous two editions, Bergman's Comprehensive Encyclopedia of Human Anatomic Variation is the third installment of the classic human anatomical reference launched by Dr. Ronald Bergman. With both new and updated entries, and now illustrated in full color, the encyclopedia provides an even more comprehensive reference on human variation for anatomists, anthropologists, physicians, surgeons, medical personnel, and all students of anatomy. Developed by a team of editors with extensive records publishing on both human variation and normal human anatomy, Bergman's Comprehensive Encyclopedia of Human Anatomic Variation is the long awaited update to this classic reference.

This text looks into communicating psychiatric patient histories, from the asylum years to the clinics of modern day. In this study of tales of mental illness, Carol Berkenkotter examines the evolving role of case history narratives in the growth of psychiatry as a medical profession.

The use of mobile and wireless technologies to support the achievement of health objectives (mHealth) has the potential to transform the face of health service delivery across the globe. A powerful combination of factors is driving this change. These include rapid advances in mobile technologies and applications, a rise in new opportunities for the integration of mobile health into existing eHealth services, and the continued growth in coverage of mobile cellular networks. According to the International Telecommunication Union (ITU), there are now over 5 billion wireless subscribers; over 70% of them reside in low- and middle-income countries. The GSM Association reports commercial wireless signals cover over 85% of the world's population, extending far beyond the reach of the electrical grid. For the first time the World Health Organization's (WHO) Global Observatory for eHealth (GoE) has sought to determine the status of mHealth in Member States; its 2009 global survey contained a section specifically devoted to mHealth. Completed by 114 Member States, the survey documented for analysis four aspects of mHealth: adoption of initiatives, types of initiatives, status of evaluation, and barriers to implementation. Fourteen categories of mHealth services were surveyed: health call centres, emergency toll-free telephone services, managing emergencies and disasters, mobile telemedicine, appointment reminders, community mobilization and health promotion, treatment compliance, mobile patient records, information access, patient monitoring, health surveys and data collection, surveillance, health awareness raising, and decision support systems.

Includes chapters by clinicians and researchers that cover nociceptors and pathways, central sensitization, pharmacological and nonpharmacological treatments, epidemiology, assessment, and pain syndromes.

This book is a practical guide for health care professionals encountering medical emergencies during commercial flight. Health care providers should consider responding to emergencies during flight as there are often no other qualified individuals on board. This text covers the most common emergencies encountered during flight, both general medical emergencies and those specifically tied to the effects of flying, including cardiac, respiratory, and neurological issues. Medicallegal issues are considered in depth, for both United States domestic and international flights, as there is potential legal risk involved in giving medical assistance on a flight. Additional chapters are dedicated to pre-flight clearance and the role non-physician healthcare providers can play. In-Flight Medical Emergencies: A Practical Guide to Preparedness and Response is an essential resource for not only physicians but all healthcare professionals who travel regularly.

This IEA volume brings together a set of essays written by leading authors on themes relevant to the study of economic development. The book covers a range of topics many of which are relevant to policy issues. The contributors bring new insights from empirical research in a range of economies with chapters including discussions of the UN development agenda, fiscal policy in Latin America, poverty data in Africa and Jordan, and monetary policy in South Africa. Contemporary Issues in Development Economics is an essential read for researchers, scholars and policymakers interested in economic development in low- and middle-income countries.

This is the first book to set out a full range of research strategies for evaluating the clinical practice of acupuncture. Leading acupuncturists and researchers with international reputations share their expertise. They illustrate their descriptions with practical examples of what has worked and what has not. It outlines many of the key challenges in the field. These challenges relate to the nature of acupuncture and the gap between current research evidence and the actual experiences of acupuncturists in the field. By focusing the chapters on key research questions, rather than methods, the book has a user-friendly feel. Each chapter is easily accessible with brief explanations of research designs as well as vignettes of relevant past research. The book is based on a deep understanding of acupuncture, with its inherent complexity in practice, whether based on traditional principles or more modern concepts. By incorporating a more sophisticated understanding of the field, this book details a range of strategies aiming to develop the evidence base with the utmost rigour. It is the first book on acupuncture research to take this unique view, integrating the very best of evidence-based medicine with a genuine sensitivity to the discipline of acupuncture, from its traditional and holistic roots to its more modern interpretations.
