Acne Causes And Clinical Features The Pharmaceutical Journal

Acne is associated with significant psychological problems including an increased risk of depression, anxiety, reduced attachment to friends, low self-esteem and in some cases suicidal ideation. Identification of the extent of psychological impact is needed to direct management appropriately [Dawson, 2013 ; Moradi Tuchayi, 2015 ; Asai, 2016 ; Lynn, 2016 ; Zaenglein, 2016 ; Bienenfeld, 2017 ; de Vries, 2018].

Acne: Causes, Risk Factors, and Treatment

Four main factors cause acne: Excess oil (sebum) production; Hair follicles clogged by oil and dead skin cells; Bacteria; Inflammation; Acne typically appears on your face, forehead, chest, upper back and shoulders because these areas of skin have the most oil (sebaceous) glands. Hair follicles are connected to oil glands.

Acne - Symptoms and causes - Mayo Clinic

Acne is a chronic skin condition which occurs when the hair follicles get clogged with dead skin cells and sebum, which is secreted by the sebaceous glands. This is very common among teenagers due to hormonal changes and increased androgen production during puberty; genetics also play a major role in the etiology.

Difference Between Acne and Pimple | Clinical Features ...

Clinically, the features of acne can have many forms. Closed comedones are approximately 1-3 mm in diameter. Open comedones are approximately 2-5 mm in diameter, and this dark core is a packed...
