called Factoring by GCF or Greatest Common Factor. How to factor a GCF. List all of the factors for each term in the expression. For example, if the given expression was  $18x+24$ , factor 18 and 24. The "x" term cannot be factored further. The factors of 18 are 1, 2, 3, 6, 9 and 18. The factors of 24 are 1, 2, 3, 4, 6, 8,
