Applied Latent Class Analysis introduces several innovations in latent class analysis to a wider audience of researchers. Many of the world's leading innovators in the field of latent class analysis contributed essays to this volume, each presenting a key innovation to the basic latent class model and illustrating how it can prove useful in situations typically encountered in actual research.

In LCA, the responses of all participants to all items are analyzed. A specified latent class model is fit to the data, and the parameter estimates are obtained. Once the number of classes is selected, the output includes the probability of a response to EACH risk item in the inventory for each latent class.
