CAPITAL BUDGETING PROBLEMS: CHAPTER 10 Solutions to Problems Note to instructor: In most problems involving the IRR calculation, a financial calculator has been used. Answers to NPV-based questions in the first ten problems provide detailed analysis of the present value of individual cash flows.

Capital budgeting techniques that use discounted cash flow analysis are widely recommended in the financial literature and frequently used by business. However, there is accumulating evidence that companies are reluctant to commit funds to long-term projects. The most likely explanation is that actual experience has resulted in disappointing returns, often below a company's cost of capital. No capital budgeting technique currently in use applies probabilities to future inflow estimates, to adjust the financial analysis to previous experience with the requesting business unit. The 'discounted payback plus' technique recommended in this paper may be a reasonable alternative approach to the analysis of a capital budgeting project, yielding more conservative results based on the expected value of cash inflows beyond the point of payback.

In this paper we formulate an iterative solution procedure for stochastic capital budgeting problems in multidivisional firms where headquarters must arrive at an optimal divisional allocation of capital assets. It is assumed that headquarters allows for its responsibility by accepting a calculated risk that periodic budgetary constraints might be violated. This attitude towards risk is modelled via the use of chance constraints. The organization of the information exchange between headquarters and divisions is basically derived from the decomposition principle but possible variations are discussed. The proposed procedure allows the consideration of divisions who are cheating while submitting divisional information to headquarters. (Author).

Capital investment decisions are a constant challenge to all levels of financial managers. Capital Budgeting: Theory and Practice shows you how to confront them using state-of-the-art techniques. Broken down into four comprehensive sections, Capital Budgeting: Theory and Practice explores and

Access Free Capital Budgeting Problems With Solution

illustrates all aspects of the capital budgeting decision process. Pamela Peterson and Frank Fabozzi examine the critical issues and limitations of capital budgeting techniques with an in-depth analysis of: Classifying capital budgeting proposals Determining the relevant cash flows for capital budgeting proposals Assessing the economic value of a capital budgeting proposal using different techniques Incorporating risk into the capital budgeting decision Evaluating whether to lease or borrow-to-buy Capital Budgeting: Theory and Practice provides the knowledge, insight, and advice that will allow you to handle one of the most important aspects of your firm's financial management. Advanced enough for practitioners yet accessible enough for the novice, Capital Budgeting: Theory and Practice is your complete guide to understanding and benefiting from the essential techniques of capital budgeting.
