Arch Dam. Monar Dam in Scotland. Arch dams are made from concrete. They are curved in the shape of an arch, with the top of the arch pointing back into the water. An arch is a strong shape for resisting the pushing force of the water behind the dam. Arch dams are usually constructed in narrow, steep sided valleys.

Types of Dam - British Dam Society

Pressures exerted on the dam by water in the reservoir tend to cause greater adjustments near the base of the dam than at shallower depths. A cross section of a concrete gravity dam, presumed to behave as a rigid body. When the reservoir is empty, the weight of the dam is directed vertically downward.

Foundations - Pressures Associated with Dams and Reservoirs |

A siphon spillway is a type of spillway in which surplus water is disposed to downstream through an inverted U shaped conduit. It is generally arranged inside the body or over the crest of the dam. In both types of siphon spillways, air vents are provided at the bent portion of the upper passageway to prevent the entrance of water when the water level is below the normal pool level.
