Structures And Algorithm Analysis

Data Structures - Algorithms Basics. Algorithm is a step-by-step procedure, which defines a set of instructions to be executed in a certain order to get the desired output.

Algorithms are generally created independent of underlying languages, i.e. an algorithm can be implemented in more than one programming language.

Data Structures - Algorithms Basics - Tutorialspoint

For a given algorithm, we can represent best, worst, and average cases in the form of expression. Example:- $f(n) = n^2 + 500$, for worst case. $f(n) = n + 100n + 500$, for best case.

Weiss, Data Structures and Algorithm Analysis in Java, 3rd ...

In computer science, the analysis of algorithms is the process of finding the computational complexity of algorithms – the amount of time, storage, or other resources needed to execute them. Usually, this involves determining a function that relates the length of an algorithm's input to the number of steps it takes (its time complexity) or the number of storage locations it uses (its space ...
