Dynamic SQL: Applications, Performance, and Security by ...

Dynamic SQL is a very reasonable solution. In fact, it can prevent some performance problems that arise when SQL statements are optimized the first time a procedure is run. This can result in sub-optimal execution plans for other parameters. My recommendation is to generate exactly the SQL you want.

sql server - dynamic sql performance and implementation ...

Dynamic SQL is the SQL statement that is constructed and executed at runtime based on input parameters passed. Let us go through some examples using the EXEC command and sp_executesql extended stored procedure. Executing dynamic SQL using EXEC/ EXECUTE command. EXEC command executes a stored procedure or string passed to it.

Dynamic SQL in SQL Server

You must know that dynamic SQL will ALWAYS be recompiled. So performance wise it is not a good thing. In this case you might not notice it, but i would still go for the most best practice, not using dynamic sql. Also, if you really must use a dynamic query you might also look into the sp_executesql vs EXEC.

sql server - Dynamic Query performance comparison in sql ...

Dynamic SQL: Applications, Performance, and Security helps you bring the productivity and user-satisfaction of flexible and responsive applications to your organization safely and securely. Your organization's increased ability to respond to rapidly changing business scenarios will build competitive advantage in an increasingly crowded and competitive global marketplace.

Dynamic SQL: Applications, Performance, and Security [Book]

Static SQL is SQL statements in an application that do not change at runtime and, therefore, can be hard-coded into the application. Dynamic SQL is SQL statements that are constructed at runtime; for example, the application may allow users to enter their own queries. Thus, the SQL statements cannot be hard-coded into the application.

Static SQL Versus Dynamic SQL | Designing Databases for ...

The performance of native dynamic SQL in PL/SQL is comparable to the performance of static SQL because the PL/SQL interpreter has built-in support for native dynamic SQL. Therefore, the performance of programs that use native dynamic SQL is much better than that of programs that use the DBMS_SQL package.

Dynamic SQL - Oracle

Yet dynamic SQL is feared by many due to concerns over SQL injection or code maintainability. Dynamic SQL: Applications, Performance, and Security in Microsoft SQL Server helps you bring the productivity and user-satisfaction of flexible and responsive applications to your organization safely and securely. Your organization's increased ability to respond to rapidly changing business scenarios will build competitive advantage in an increasingly crowded and competitive global marketplace.
