Sometimes the engine failsafe mode is triggered due to a sensor failure or an electrical glitch. It's also common for a security system fault to engage this warning light, which means it's not always a mechanical issue that's causing the failsafe. Some people believe it's possible to reset the engine failsafe mode through some less-

This light comes on when the car's engine management system senses a fault or missing input signal, and puts itself into a safe mode. This has nothing to do with oil service, coolant level, etc. It is a failed component or operating range out of spec or missing sensor signal that is causing this light.
