[PDF] ME6403 Engineering Materials and Metallurgy Lecture ... Metallurgical & Materials Engineering encompasses three inter-related engineering disciplines: mineral processing, extractive (or process) metallurgy, and materials science and engineering. While remaining true to its School of Mines heritage, the program curriculum features a strong core of fundamental engineering, process, and materials courses in addition to fulfilling Montana Tech's general education requirements.

Metallurgy is a sub-domain of materials science and engineering that studies the chemical behaviour of metallic elements, their inter-metallic compounds, and their mixtures, which are called alloys . Metallurgy encompasses both the science and the technology of metals. That is, the way in which science is applied to the production of metals, and the engineering of metal components used in products for both consumers and manufacturers.

Metallurgical engineers produce materials that power our bodies and our world, forging advances in materials development that impact nearly every aspect of modern life. We transform the earth's mineral resources into advanced alloys used in surgical implants, computer chips, superconductors, automobiles, and aircraft.
