reference surface may be taken tangent plane to the geoid, fig. For areas $< 10 \text{ KM}^2$ Principle of plane survey is applied and curvature is neglected. Knowing that for 200 KM^2 , the difference between the sum of the spherical angles and the plane angles would = $1''$. Difference of 20 km Arc to its chord length is about 8mm. Above assumption is true for positional applications but not elevations. Cause geoid deviate ...

Engineering surveying involves determining the position of natural and man-made features on or beneath the Earth's surface and utilizing these features in the planning, design and construction of works. It is a critical part of any engineering project. Without an accurate understanding of the size, shape and nature of the site the project risks expensive and time-consuming errors or even catastrophic failure. This fully updated sixth edition of Engineering Surveying covers all the basic principles and practice of the fundamentals such as vertical control, distance, angles and position right through to the most modern technologies. It includes: * An introduction to geodesy to facilitate greater understanding of satellite systems * A fully updated chapter on GPS, GLONASS and GALILEO for satellite positioning in
