Example Program For Crestron Setup Guide

Crestron creates demo programs for most of its products. You can find example programs on the individual products pages under the resources tab or on the example programs page of the website found here.

Demo Programs - support.crestron.com
The example programs are designed to assist ADVANCED programmers. The programming provided here is provided "as is" without technical support from Yamaha as an additional resource. Please

contact Crestron directly for information on Crestron products, design software application and training.

Example Programs: CRESTRON - Yamaha Corporation
NOTE: If the Crestron Home Setup app

Setup Guide does not connect to the Crestron Home processor automatically, enter the Crestron Home processor's hostname and tap Connect. The default hostname is the model of the Crestron Home processor followed by the entire MAC address. For example, the MAC address for a CP4‑R is "CP4‑R‑[MAC address]".

Initial Processor Setup - Crestron Electronics

Windows program and replace the current IP address on the Pulse_Hub_IP_Address parameter with the actual IP address of your hub. 4. Comment out the entire

"Motors" subfolder in the example program. 5. Compile and load the example program to your Crestron processor.

CRESTRON INTEGRATION SUPPORT SETUP INSTRUCTIONS

The sample provided here is actually a very recent revision of a very old program. The original program used page flips to switch between modes for various input devices. The current version uses subpages and is entirely driven by device feedback, making the program more accurate and much easier to maintain.
