Publisher's Note: Products purchased from Third Party sellers are not guaranteed by the publisher for quality, authenticity, or access to any online entitlements included with the product. The most comprehensive guide to aircraft powerplants?fully updated for the latest advances This authoritative textbook contains all the information you need to learn to master the operation and maintenance of aircraft engines and achieve FAA Powerplant certification. The book offers clear explanations of all engine components, mechanics, and technologies. This ninth edition has been thoroughly revised to include the most current and critical topics. Brand-new sections explain the latest engine models, diesel engines, alternative fuels, pressure ratios, and reciprocating and turbofan engines. Hundreds of detailed diagrams and photos illustrate each topic. Aircraft Powerplants, Ninth Edition covers:
•Aircraft powerplant classification and progress
•Reciprocating-engine construction and nomenclature
•Internal-combustion engine theory and performance
•Lubricants and lubricating systems
•Induction systems, superchargers, and turbochargers
•Cooling and exhaust systems
•Basic fuel systems and carburetors
•Fuel injection systems
•Reciprocating-engine ignition and starting systems
•Operation, inspection, maintenance, and troubleshooting of reciprocating engines
•Reciprocating engine overhaul practices
•Principal parts, construction, types, and nomenclature of gas-turbine engines
•Gas-turbine engine theory and jet propulsion principles
•Turbine-engine lubricants and lubricating systems
•Ignition and starting systems of gas-turbine engines
•Turbofan, turboprop, and turboshaft engines
•Gas-turbine operation, inspection, troubleshooting, maintenance, and overhaul
•Propeller theory, nomenclature, and operation
•Turbopropellers and control systems
•Propeller installation, inspection, and maintenance
•Engine indicating, warning, and control systems

Air traffic controllers need advanced information and automated systems to provide a safe environment for everyone traveling by plane. One of the primary challenges in developing training for automated systems is to determine how much a trainee will need to know about the underlying technologies to use automation safely and efficiently. To ensure safety and success, task analysis techniques should be used as the basis of the design for training in automated systems in the aviation and aerospace industries. Automated Systems in the Aviation and Aerospace Industries is a pivotal reference source that provides vital research on the application of underlying technologies used to enforce automation safety and efficiency. While highlighting topics such as expert systems, text mining, and human-machine interface, this publication explores the concept of constructing navigation algorithms, based on the use of video information and the methods of the estimation of the availability and accuracy parameters of satellite navigation. This book is ideal for aviation professionals, researchers, and managers seeking current research on information technology used to reduce the risk involved in aviation.
