This report explains the ecology and social profile of coastal systems in Kenya, Mozambique and Tanzania in order to contribute to the development of effective strategies to enhance the resilience of marine and coastal systems in the Western Indian Ocean. Special consideration is given to the effects and consequences of climate change and economic development.

The Yearbook of International Organizations provides the most extensive coverage of non-profit international organizations currently available. Detailed profiles of international non-governmental (NGO) and intergovernmental organizations (IGO), collected and documented by the Union of International Associations, can be found here. In addition to the history, aims and activities of international organizations, with their events, publications, and contact details, the volumes of the Yearbook include networks between associations, biographies of key people involved and extensive statistical data. Volume 1 (A and B) covers international organizations throughout the world, comprising their aims, activities and events. This includes names (in English, French and, where available, other languages), abbreviations and descriptions of over 34,000 not-for-profit organizations currently active in every field of human endeavor, as well as references to associated organizations, whose goals cross all economic, political and geographical borders, offering an insight into new, productive relationships. Volume 1 also allows quick and easy cross-referencing from volumes 2, 3, 4, and 6.

This report provides 13 case studies of fisheries rebuilding initiatives, including measures to regulate exploitation patterns for cod and herring in the Northeast Atlantic, and a performance assessment for Eastern Atlantic and Mediterranean Bluefin tuna.

Fisheries in the Pacific: The Challenges of Governance and Sustainability is a multidisciplinary book, which examines various aspects of coastal and oceanic fisheries in Pacific waters. These interrelated fisheries sectors are critical for regional food security and also represent a reserve of food resources for the rest of the world. The introduction and eight chapters highlight that both these sectors raise major economic and ecological issues while revealing significant social changes, political asymmetries and alliances, geostrategic rationales, developments in legislation, customary dynamics, and conservation challenges. Through complementary approaches and interpretations of both quantitative and qualitative data, this book aims to contribute to a better understanding of the current situation of fisheries in the Pacific. It also responds to the compelling need to establish a constructive and ongoing dialogue on the matter between social scientists and environmental scientists, based in Europe and in the Pacific Islands, and between these experts and the various stakeholders and policy-making institutions involved in the Pacific region.

This manual aims at providing practical guidance on how to achieve gender-equitable small-scale fisheries in the context of the implementation of the SSF Guidelines. Women play a key role, in particular in post-harvest activities relating to processing, marketing and trade, but their role remains undervalued. Within the broader context of the FAO Blue Growth Initiative, this publication therefore contributes to SP 1 Outcome 101 - Member countries and their development partners make explicit political commitments in the form of policies, investment plans, programmes, legal frameworks and the allocation of necessary resources to eradicate hunger, food insecurity and malnutrition. The target audience for this manual is twofold: (i) policy makers/public administrations working on small-scale fisheries will be informed about ways to ensure gender-sensitive policies, investments and small-scale fisheries sector support. (ii) CSOs/fisheries organizations will receive guidance on how to actively ly support the empowerment of women in small-scale fisheries. However, this publication is also relevant for other audiences who can provide a support function to the to key audiences, namely: academia/research, donors/resource partners, FAO staff.

The objective of this Symposium is to identify pathways to strengthen the science and policy interplay in fisheries production, management and trade, based on solid sustainability principles for improved global outcomes on the ground. Ultimately, the debates and conclusions of the symposium will prepare the way for the development of a new vision for the way we perceive and use capture fisheries, outlining how the sector can respond to the complex and rapidly changing challenges facing society, and support the planning process of the UN Decade of Ocean Science for Sustainable Development (2021-2030).

971 references on wild foods in agricultural systems are selected with the intention to provide an indication of the range of research carried out on this subject, highlighting key themes of policy interest. The bibliography is organised into a number of different thematic sessions. Each session starts with an introduction with references to major issues in the literature and areas where questions remain unanswered. Each reference is provided with an abstract. Three indices are given: a regional index, an ethnic groups index and a thematic index

These proceedings contain the main papers and presentations from Sharing the Fish '06 Conference: Allocation issues in fisheries management conference that was held in Fremantle, Western Australia, 27 February to 2 March 2006. They include the substantial work of the keynote and invited speakers covering the three theme sessions of the conference which addressed the critical fisheries management topics of: (i) allocations across jurisdictions (including governmental, regional and multilateral, and national allocation issues); (ii) allocations within sectors (including extractive and non-extractive allocations issues; management issues; and, commercial, artisanal and tourism allocations issues); and (iii) allocations between sectors (including customary/indigenous, recreational, commercial, and artisanal/subsistence allocation issues).

This publication gives an updated review of the quantity of discards in the world's marine fisheries, using information from a broad range of fisheries in all continents. A number of policy issues are discussed including a 'no discards' approach to fisheries management, the need for balance between bycatch reduction and bycatch utilisation initiatives, and concerns arising from incidental catches of marine mammals, birds and reptiles. The report also highlights the need for more robust methods of estimating discards, and the development of bycatch management plans.
