The Server Administration page of the Control Panel lets you perform various tasks related to the portal server itself that aren't directly related to the resources in the portal. Clicking the link makes this clear: you're immediately presented with a graph showing the resources available in the JVM. Note: You can use Liferay Connected Services (LCS) to obtain additional performance metrics for your portal servers.

For a portal-scoped Message Boards Administrator role, you might want to grant content permissions for every Message Boards action listed. After you click Save, you'll see a list of all permissions currently granted to the role. From the Summary view, you can add more permissions or go back by clicking on the Back icon.

[Roles and Permissions – Liferay Help Center](#)

Liferay allows users to each have a personal site consisting of public and private pages. Permissions can be granted to allow users to customize their personal sites at will. Originally, the default configuration of those pages could only be determined by the portal administrator through the portal-ext.properties file and, optionally, by providing the configuration in a LAR file.

[User Groups – Liferay Help Center](#)

Liferay Portal provides three administration portlets: Enterprise Admin, Organization Admin, and Location Admin. The three portlets provide different scopes of administration. As illustrated by the diagram, the Enterprise Admin Portlet has the highest level of administrative functions. It has access to all organizations, locations, and users.

Liferay Portal with Tomcat. Overview. This User Guide is written specifically for a CentOS 7 64bit Liferay Portal with Tomcat (no Control Panel) template. This template comes with all the individual components for Liferay using MySQL already configured as a bundle. If you only need to install Tomcat, you can either choose one of the Tomcattemplates when you create your Virtual Server, or you can install Tomcat from the Control Panel after the Virtual Server has been created.
