Load Balancing Using Pcc Routeros

Understanding the PCC Load Balancing

Read Free Load Balancing Using Pcc Routeros Mum

Solution 1. Packet - The container for our data, header and payload. 2. Connections - “ Conduit ” through which host to host communication occurs, based on Src/Dst addresses and ports 3. Mangle Facility - Firewall function within RouterOS that allows you to create a mark which is then associated with packets

Use src-address as classifier, this way you will get rid of problems like https/broken link, streaming issues etc (due to ip changing on each request) . Load balancing using this PCC technique (src-address) requires that users must be hitting the PCC box directly (either dhcp/ppp server etc). In this method user will be tagged with specific WAN link
