Fluid mechanics is basically
 $\Sigma F = d(mv/dt)$ (Newton's 2nd
Law, the sum of the forces

Online Library Mechanical Fluid Mechanics Wordpress

is equal to the rate of change of momentum) applied to a fluid. What distinguishes a fluid from a solid is that a solid deforms only a finite amount due to an applied shear stress (unless it breaks),

Online Library Mechanical Fluid Mechanics Wordpress

whereas the fluid continues to deform as long as the shear stress is applied.

Fluid Mechanics: Fluid Statics ~ AxiBook
