Background: For patients who have atherosclerotic cardiovascular disease (ASCVD), statins are considered first line therapy for lowering low density lipoprotein cholesterol (LDL-C). Previously reviewed literature demonstrates increased utilization of high-intensity statins, but unchanged LDL-C levels after the 2013 American College of Cardiology (ACC) and the American Heart Association (AHA) guideline release regarding patients with ASCVD. However, comparative outcome studies have been inconclusive on ASCVD risk associated treatment practice decisions after the 2013 ACC/AHA guideline implementation, and comparisons of statin utilization have only been conducted with short-term follow-up (1-2 years post guideline release). **Objectives/Purpose:** This study compared differences in achieving LDL-C goals in patients with ASCVD before and after the 2013 ACC/AHA guideline release. **Methods:** The retrospective cohort study used laboratory and claims data from December 2012 through December 2017 for patients (18 to 89 years of age) cared for in the Baylor Scott & White Health integrated health care system. Patients

had ?1 claim for a statin prescription, ?1 claim with a diagnosis of clinical ASCVD, and a cohort identity based on year of their first ASCVD outpatient or inpatient encounter. Members in the 2014, 2015, and 2016 cohorts were propensity score matched to the baseline (2013) cohort by age, gender, prior-year Charlson Comorbidity index (CCI), and number of lipid-lowering therapies (LLT). Differences in high-intensity statin utilizers defined according to the ACC/AHA guideline, LDL-C levels, non-high density lipoprotein (non-HDL) levels, mean statin doses, and percentage utilizers achieving National Lipid Association (NLA) guideline goals were determined. Results: Among 2,573 patients, the mean (SD) age was 70(11) years and 48% were female. The percentage of patients on high-intensity statin therapy – defined as atorvastatin 40mg–80mg or rosuvastatin 20mg–40mg – significantly increased over time (24% in 2013, 36% in 2014, 40% in 2015, and 48% in 2016; p

With a clear explanation of drug prototypes and how they work, Lehne's Pharmacology for Nursing Care, 10th Edition gives you the background you need to understand drugs currently on the market, and those not yet released. This perennial favorite of students and teachers simplifies complex concepts while distinguishing need-to-know content from the material that's merely nice to know. The 10th edition includes updated drug content to reflect the very latest FDA approvals, withdrawals, and therapeutic uses, as well as corresponding updated nursing content. It also includes an updated prototype drugs section, summarizing their major uses, and an updated table detailing care throughout the lifespan of the patient. Additionally, each chapter ends with a nursing implications summary to help you fully understand the material and apply it to clinical nursing practice. Prototype Drugs features serve as a quick-reference learning aid so you can apply your understanding to related drugs currently on the market as well as drugs that will be released in the future. UNIQUE! Engaging writing style with clear explanations makes difficult pharmacology concepts easy to grasp and even enjoyable to learn. Nursing implications of drug therapy are integrated throughout the text to reinforce the integral relationship between drug therapy and nursing care. UPDATED Special Interest Topic boxes focus on currently trending issues in pharmacology, eliminating out-of-date content. Large print highlights essential, need-to-know information, and small print indicates nice-to-know information. QSEN focus includes Patient-Centered Care Across the Life Span features highlighting safe and appropriate patient care during different phases of life. Safety Alert features emphasize the QSEN competency relating to patient safety. Student-friendly features make learning easier with concise drug summary tables, chapter outlines, key points, and a visual guide to the prototype drugs in each class. Concise drug summary tables present detailed information for individual drugs, including drug class, generic and trade names, dosages, routes, and indications. Selected Canadian drug names are indicated with a maple-leaf icon throughout the text. Separate Bioterrorism chapter discusses the clinical manifestations and treatment of biological weapon

This is a highly practical resource focusing on the application of current guidelines and practice standards in the clinical management of cardiovascular risk factors. It reflects the most current information and clinical practices, including the growing number of biomarkers and genetic variants that have greatly changed the understanding of the pathophysiology of cardiovascular risk. The primer presents concise descriptions of each major cardiovascular risk factor, key methodologies in cardiovascular risk assessment, special issues in risk assessment of specific patient populations, and practical, to-the-point discussions of current best practices in clinical management.

This issue of Endocrinology and Metabolism Clinics examines the timely topic of Lipidology. In addition to the New Recommendations - ACC/AHA Lipid Guidelines, the issue also includes Familial Hypercholesterolemia; LDL Apheresis; Lipids in Pregnancy and Women; Diabetes and Lipidology; Diabetic Dyslipidemia; Fatty Liver Disease; Lipids and HIV Disease; Residual Risk; and Statins' effects on diabetes, cognition, and liver safety.

This issue of Physician Assistant Clinics, guest edited by Daniel Thibodeau MHP, PA-C, DFAAPA, is devoted to Cardiology. Dyslipidemia is a major risk factor for cardiovascular events, cardiovascular mortality, and all-cause mortality. The earlier in life dyslipidemia is treated, the better the prognosis. The current book is an excellent one on dyslipidemia written by experts on this topic. This book includes 12 chapters including 5 on lipids, 4 on hypercholesterolemia in children, and 3 on the treatment of dyslipidemia. This book should be read by all health care professionals taking care of patients, including pediatricians since atherosclerotic cardiovascular disease begins in childhood.

This book provides an overview of statin-associated muscle symptoms (SAMS) from clinical presentation to treatment and possible metabolic causes. It examines the risk factors, presentations, diagnosis and differential diagnosis, clinical management, and financial costs of SAMS. The book also highlights patients' perspectives on SAMS such as the psychosocial, emotional, and societal factors influencing their perceptions and experiences. Finally, the book presents the results of observational and clinical trials on the prevalence of SAMS, clinical trials for treatments, and potential future research approaches for improving the understanding and treatment of SAMS. A key addition to the Contemporary Cardiology series, Statin-Associated Muscle Symptoms is an essential resource for physicians, medical students, residents, fellows, and allied health professionals in cardiology, endocrinology, pharmacotherapy, primary care, and health promotion and disease prevention.

This timely, concise title provides an important update on clinical lipid management. Using information from recent clinical trials and in special populations, the book begins by offering an easy-to-read overview of LDL, HDL, and triglyceride metabolism and the genetics of lipid disorders. The link between inflammation and lipids, and how this relates to atherosclerosis development, is also addressed, as are the measures of subclinical atherosclerosis in patients with abnormal lipid levels. Lipid abnormalities in children, with a particular focus on vulnerable populations (with an emphasis on ethnicity and childhood obesity), are covered. The treatment goals and approaches for managing lipids in the clinic

are thoroughly discussed, emphasizing the important role of statin use and addressing controversies of lipid management in special populations such as heart failure, end stage kidney disease and fatty liver disease. Of special note, an important update on how new HIV medications impact lipid levels is provided. In all, *Lipid Management: From Basics to Clinic*, is an invaluable, handy resource for understanding changes in lipids in different populations and for sharpening the clinical approach to managing complicated lipid cases.
