In this book the Groupe des Dombes a widely respected yet unofficial dialogue of Reformed, Lutheran, and Catholic scholars from French-speaking Europe undertakes a comprehensive study of the complex issue of doctrinal authority in the church. This includes the role of Scripture, of confessional texts, of decision-making bodies, and of individual persons entrusted with authority in service to the unity of faith. / While a number of previous ecumenical dialogues have studied the question of authority with a particular focus on the ministry of the Bishop of Rome, the Groupe des Dombes lays out the complex constellation of questions that is at issue in the differing ethos of Protestant and Catholic traditions. Its challenge to the churches reflects the agenda of ecumenical dialogue for decades to come.

Experience the thrill of an unexpected love that defies all boundaries in the third historical romance in New York Times bestselling author Catherine Anderson ' s Comanche series... Torn between the white and Comanche worlds of her parents, Indigo Wolf has grown up estranged from the townspeople of Wolf ' s Landing, Oregon. No decent woman calls her a friend, and no man understands her strange, elusive spirit—until rugged Jake Rand comes to town. Jake offers to act as foreman of the family mine after a series of mysterious accidents have left Indigo ' s father seriously injured. But Jake ' s real motives are as secret as his true identity, and as personal as his growing attraction to Indigo...

THE #1 KINDLE BESTSELLER. 'A beautiful, unconventional, uplifting love story' Paige Toon on *One Step Closer To You*. Perfect for fans of *The Bucket List* to *Mend a Broken Heart*. What do you do if you're 34, single and recovering from being jilted two weeks before your wedding day? This is Gilly Brown's dilemma. While friends are marrying and having children Gilly finds herself alone in London and holding on to her fractured family with their tragic past. At least she has her dog Ruskin and her dog-walking friends. But it's time to meet new people, Gilly gets a Monday to Friday lodger: handsome reality television producer Jack Baker. Gilly falls for Jack's charm and is transported into an exciting social whirlwind of parties, dining out and glamour. Guy, the newest recruit to her dog-walking group, isn't quite so convinced about Jack's intentions. As Guy watches them grow closer, his suspicions of Jack and his feelings for Gilly deepen. Is Jack so perfect after all... and what exactly does he get up to at the weekends?

In the last 25 years, planetary science experienced a revolution, as vast oceans of liquid water have been discovered within the heart of the icy moons of our Solar System. These subsurface oceans lie hidden under thick layers of ice. We call them ocean worlds. Some of these icy moons, such as Ganymede, may hold two to three times more liquid water than all the water present on Earth, while others, such as Enceladus and Europa, are thought by astrobiologists to be our best hope of finding extraterrestrial life. In this book, we will explore and compare a variety of Solar System ocean worlds, meeting in the process 22 of the most intriguing objects, from the giant asteroid Ceres to the enigmatic, distant Sedna. In doing so, we will also encounter the multiple spacecraft that brought back most of what we know of these worlds (Pioneers, Voyagers, Cassini-Huygens, etc.), as well as the latest scientific research on this new topic. We will also entertain the possibility of life on each of these ocean worlds by assessing their habitability, as ultimately, these ocean worlds might hold the key to answering the fundamental questions in life: How did life appear? Where do we come from? Is there life out there?

This book explores the practicality of using the existing subsurface geology on the Moon and Mars for

protection against radiation, thermal extremes, micrometeorites and dust storms rather than building surface habitats at great expense at least for those first few missions. It encourages NASA to plan a precursor mission using this concept and employ a " Short Stay " Opposition Class mission to Mars as the first mission rather than the " Long Stay " concept requiring a mission that is too long, too dangerous and too costly for man ' s first missions to Mars. Included in these pages is a short history on the uses of caves by early humans over great periods of time. It then describes the ongoing efforts to research caves, pits, tunnels, lava tubes, skylights and the associated technologies that pertain to potential lunar and Mars exploration and habitation. It describes evidence for existing caves and lava tubes on both the Moon and Mars. The work of noted scientists, technologists and roboticists are referenced and described. This ongoing work is more extensive than one would think and is directly applicable to longer term habitation and exploration of the Moon and Mars. Emphasis is also given to the operational aspects of working and living in lunar and Martian caves and lava tubes.

A revised edition to applied gas dynamics with exclusive coverage on jets and additional sets of problems and examples The revised and updated second edition of Applied Gas Dynamics offers an authoritative guide to the science of gas dynamics. Written by a noted expert on the topic, the text contains a comprehensive review of the topic; from a definition of the subject, to the three essential processes of this science: the isentropic process, shock and expansion process, and Fanno and Rayleigh flows. In this revised edition, there are additional worked examples that highlight many concepts, including moving shocks, and a section on critical Mach number is included that helps to illuminate the concept. The second edition also contains new exercise problems with the answers added. In addition, the information on ram jets is expanded with helpful worked examples. It explores the entire spectrum of the ram jet theory and includes a set of exercise problems to aid in the understanding of the theory presented. This important text: Includes a wealth of new solved examples that describe the features involved in the design of gas dynamic devices Contains a chapter on jets; this is the first textbook material available on high-speed jets Offers comprehensive and simultaneous coverage of both the theory and application Includes additional information designed to help with an understanding of the material covered Written for graduate students and advanced undergraduates in aerospace engineering and mechanical engineering, Applied Gas Dynamics, Second Edition expands on the original edition to include not only the basic information on the science of gas dynamics but also contains information on high-speed jets.

A collection of Millay's poetry including "The Buck in the Snow", "Morituras", "Dawn", and more.

This report analyses how schools in England have interpreted and begun to respond to the government's 'self-improving school-led system' (SISS) policy agenda, an overarching narrative for schools policy since 2010 that encompasses an ensemble of reforms including academies, multi-academy trusts (MATs) and Teaching School Alliances (TSAs). Based on a large-scale, four-year, mixed-methods study, the report asks whether or not the models of co-ordination and school support emerging locally since 2010 represent a genuine basis for an equitable and inclusive 'school-led' system. It explores the factors that support and hinder such developments as well as the implications for schools and school leadership. The analysis draws on governance theory to evaluate the reforms, which are conceived as an attempt to mix and re-balance three overlapping approaches to co-ordinating the school system: hierarchy, markets and networks. This shows that while one popular interpretation of the SISS agenda is that it requires inter-school partnerships to 'self-organize' their own 'school-led' improvement, this is in fact a partial account that underplays the dominant influences of hierarchical and market mechanisms on the thinking and actions of schools and school leaders and the networks they are developing. The report includes important new empirical findings, for example on the impact of MATs of different sizes and on the relationship between Ofsted inspection outcomes and levels of socio-economic stratification between schools. It also combines the perspectives of multiple case study schools across four different localities to provide rich insights into leadership decision-making and agency in the context of local status hierarchies and rapid policy-driven change. As a result, while focusing on changes

in England, it provides a unique set of insights into how different governance regimes interact across different local contexts to influence patterns of schooling and school-to-school collaboration - insights that will have relevance for research and practice on school system governance more widely.

In recent years, planetary science has seen a tremendous growth in new knowledge. Deposits of water ice exist at the Moon's poles. Discoveries on the surface of Mars point to an early warm wet climate, and perhaps conditions under which life could have emerged. Liquid methane rain falls on Saturn's moon Titan, creating rivers, lakes, and geologic landscapes with uncanny resemblances to Earth's. *Vision and Voyages for Planetary Science in the Decade 2013-2022* surveys the current state of knowledge of the solar system and recommends a suite of planetary science flagship missions for the decade 2013-2022 that could provide a steady stream of important new discoveries about the solar system. Research priorities defined in the report were selected through a rigorous review that included input from five expert panels. NASA's highest priority large mission should be the Mars Astrobiology Explorer Cacher (MAX-C), a mission to Mars that could help determine whether the planet ever supported life and could also help answer questions about its geologic and climatic history. Other projects should include a mission to Jupiter's icy moon Europa and its subsurface ocean, and the Uranus Orbiter and Probe mission to investigate that planet's interior structure, atmosphere, and composition. For medium-size missions, *Vision and Voyages for Planetary Science in the Decade 2013-2022* recommends that NASA select two new missions to be included in its New Frontiers program, which explores the solar system with frequent, mid-size spacecraft missions. If NASA cannot stay within budget for any of these proposed flagship projects, it should focus on smaller, less expensive missions first. *Vision and Voyages for Planetary Science in the Decade 2013-2022* suggests that the National Science Foundation expand its funding for existing laboratories and establish new facilities as needed. It also recommends that the program enlist the participation of international partners. This report is a vital resource for government agencies supporting space science, the planetary science community, and the public.
