Prevalence Of Temporomandibular Joint Disorders

The prevalence of temporomandibular joint and muscle disorder (TMJD) is between 5% and 12%. Unusual for chronic pain conditions, the prevalence rates of TMJ disorders are higher among younger persons. TMJ disorders are at least twice as prevalent in women as men, and women using either supplemental estrogen or oral contraceptives are more likely to seek treatment for these conditions.

Prevalence of TMJD and its Signs and Symptoms | Data ...
The prevalence of TMD in the general population is high, between 40% to 60%. One study reported that 87% of a sample of 1040 subjects had one or more positive symptoms or clinical signs of TMD.

Prevalence of Temporomandibular Joint Disorders Among ...
TMD diagnoses used research diagnostic criteria for temporomandibular disorders (RDC/TMD-Axis-I). Examinations were performed by a single calibrated examiner (kappa > 0.80). Results: The prevalence of TMD symptoms was 34.9%; the most frequently reported symptoms were headache and neck ache (20.9%), followed by joint sounds (18.5%). Myofascial pain was the most prevalent type (10.3%), followed by disc displacement with reduction (8.0%) and arthralgia (3.5%).
