Pulmonary Pathophysiology A Clinical Approach Third Edition

Pulmonary function testing helps in distinguishing the various pulmonary and extra pulmonary causes of dyspnea. Management and treatment of dyspnea is based on altering the pathophysiological derangements that contribute to dyspnea, such as reducing ventilatory demand and airflow impedance while correcting the underlying cause.

Pulmonary Pathophysiology: A Clinical Approach, Third Edition

554 www.thelancet.com/respiratory Vol 6 July 2018. Review Pulmonary alveolar proteinosis in adults: pathophysiology and clinical approach. Anupam Kumar, Basem Abdelmalak, Yoshikazu Inoue, Daniel A Culver. Pulmonary alveolar proteinosis (PAP) is a diffuse lung disease that results from the accumulation of lipoproteinaceous material in the alveoli and alveolar macrophages due to abnormal surfactant homeostasis.

Pulmonary alveolar proteinosis in adults: pathophysiology

No other review puts disorders of lung structure and function in such clear clinical perspective as Pulmonary Pathophysiology. Bridging the gap between basic science and clinical medicine, Pulmonary Pathophysiology guides you from symptom identification to underlying disease mechanisms and through principles of management.

Pulmonary Pathophysiology: A Clinical Approach, Third Edition

our understanding of the pathogenesis, natural history, and treatment of pulmonary alveolar proteinosis (PAP) has evolved considerably. PAP is characterised by the accumulation of surfactant in alveolar macrophages and alveoli, resulting in impaired gas exchange.

Pulmonary alveolar proteinosis in adults: pathophysiology

of the pathophysiology of dyspnoea is essential. A structured clinical approach based on a thorough medical history and clinical examination is key to making the correct diagnosis. Special investigations play secondary and supplementary roles in the diagnosis; they are guided by the history and examination and

ARTICLE Dyspnoea: Pathophysiology and a clinical approach

The pathophysiology of acute pulmonary embolism is the basis for risk stratification of patients as being at high, intermediate and low risk of adverse outcomes. This risk stratification has been advocated to tailor clinical management according to the severity of pulmonary embolism. Anticoagulation is the mainstay of the treatment of acute pulmonary embolism.

Anticoagulant treatment for acute pulmonary embolism: a
