The radical in the denominator is equivalent to $\sqrt[3]{5^2}$. To rationalize the denominator, we need: $\sqrt[3]{5^3}$. To obtain this, we need one more factor of $\sqrt[3]{5}$. Therefore, multiply by $\sqrt[3]{5}$ in the form of $\frac{\sqrt[3]{5}}{\sqrt[3]{5}}$.

Dividing radical is based on rationalizing the denominator. Rationalizing is the process of starting with a fraction containing a radical in its denominator and determining fraction with no radical in its denominator. Techniques for rationalizing the denominator are shown below. CASE 1: Rationalizing denominators with one square roots. When you have one root in the denominator you multiply top and bottom by it. Example 3: Rationalize each denominator
