If the present value of the output of a system depends only on present value of the input we say that the system is a memoryless system. That is, where is some arbitrary function. For an LTI system this turns out to be convolution sum, i.e., is a linear combination of present, past and future samples of .

~~About | Bhupala's Signals and Systems Blog~~

The subject of signals and systems is an integral component of any undergraduate program in electrical engineering. It also has applications in computer engineering, mechanical engineering, aerospace engineering and bio engineering. It encompasses analysis, design and implementation of systems as well as problems involving signal-system interaction.

Oppenheim and Willskys Signals and Systems or Lathis Linear Systems and Signals are intended for. At the sophomore level my favorite book is Sieberts Circuits, Signals, and Systems. You can find a pdf on the web. Circuits that work with time-dependent signals allow us to do operations such as integration and differentiation.

~~Circuits signals and systems siebert pdf - WordPress.com~~

These, as I have illustrated elsewhere, have been extant on the system since 1900, and yes, there are a handful of locations along this route still using that same old tried and tested type of signal! My post on London's tube system last coffee pot signals here plus a more detailed examination of the one at the Barbican here.

~~Customers at Barbican - Hyde Park Now!~~

Not too long ago they were replaced by a new signalling system - but quite a number of the Northern's coffee pot signals are still in service too - as relay boxes for the new signalling! The lights in these have simply been removed and the circuits modified to adopt the new signalling system, then the pots wrapped in black tape.
