If we didn't have an IP address, then we'd want to troubleshoot that issue. The lack of an IP address can be caused by a local misconfiguration, such as an incorrect network interface config file, or it can be caused by problems with DHCP. The most common frontline tool that most sysadmins use to troubleshoot Layer 3 is the ping utility. Ping sends an ICMP Echo Request packet to a remote host, and it expects an ICMP Echo Reply in return.

Advanced Linux troubleshooting: methods and tools for ...  
The first rule of troubleshooting is to do no harm. Another way to put that is to say "don't trample all over the evidence". If you aren't careful and methodical in your approach, you may destroy clues that could help you narrow down the source of your problem. For example, Unix and Linux keep a "last accessed" date for files and directories.
