TrainController Gold and Silver - Freiwald
Brake control is an extremely safety-relevant sub-system of the train due to the fact that it must allow reliable stopping of the train in all operating conditions. EP Compact. Optimum braking is achieved if operation of a single lever by the driver results in an individual braking force being applied to each axle or bogie of the train. As the driver himself is not in a position to apply the ...

Knorr-Bremse - Brake Control
As part of our "How it Works" Series here's the vacuum brake system. Below is the all important Brake Cylinder which provides the force onto the brake blocks causing friction which slows the train down. This is a GWR Diagram of the braking system and shews the two conditions of "Brake Off" and "Brake On" - it's been coloured for clarity. The clever part is that both these conditions are ...

South Devon Railway - Brake Cylinder
If the driver applied the brake, his driver's brake valve admitted atmospheric air to the train pipe, and this atmospheric pressure applied the brakes against the vacuum in the vacuum reservoirs. Being an automatic brake, this system applies braking effort if the train becomes divided or if the train pipe is ruptured.

Railway brake - Wikipedia
If the brake fluid level falls below the MIN mark, this indicates a leakage in the brake system or worn-out brake linings. Check the brake system and do not continue riding. (Your authorized KTM workshop will be glad to help.) Page 87: Adding Rear Brake Fluid Warning Danger of accidents Reduced braking effect caused by old brake fluid ...

KTM 690 DUKE EU OWNER'S MANUAL Pdf Download | ManualsLib
The Electro-pneumatic brake system on British railway trains was introduced in 1950 and remains the primary braking system for multiple units in service today. The Southern Region of British Railways operated a self-contained fleet of electric multiple units for suburban and middle distance passenger trains. From 1950, an expansion of the fleet was undertaken and the new build adopted a ...
