Zebras (subgenus Hippotigris) are African equines with distinctive black-and-white striped coats. There are three extant species: the Grevy's zebra (Equus grevyi), plains zebra (E. quagga) and the mountain zebra (E. zebra). Zebras share the genus Equus with horses and asses, the three groups being the only living members of the family Equidae. Zebra stripes come in different patterns, unique to each individual.

Zebra Facts | Live Science Zebras, although nervous and jumpy, are a very sociable animals and generally found in large herds with other herbivores such as antelopes, wildebeest, giraffe and buffalo.

About the Zebra - Africa Guide Zebras are equids – members of the horse family (Equidae) and are medium sized, odd-toed ungulates. Zebras are native to southern and central Africa. Although zebras are very adaptable animals as far as their habitats are concerned, most zebras live in grasslands and savannas. The Grevy´ s zebra (Equus grevyi) prefers to live in sub desert and arid grasslands.

Zebras - Facts, Diet & Habitat Information - Animal Corner The zebra is not a picky eater. Unlike many ungulates in Africa, zebras do not require short grass to graze. Instead, they eat a wide variety of different grasses, sometimes even eating leaves and young trees. As a result, they can range more widely than many other species, often venturing into woodlands.

Zebra | African Wildlife Foundation Range: 1) Our planet is home to three different species of zebra, the plains zebra, Grevy´ s zebraand mountain zebra, all three species are native to Africa. 2)The most common species is the plains zebra, which roams grasslands and woodland of eastern and southern Africa.
